The Magee-Womens Research Institute and University of Pittsburgh’s “Go Red” for Women Research Network Center sponsored by the American Heart Association is now accepting applications for the third year of our “Go Red” Multi-Disciplinary Research Fellowship in Women’s Cardiovascular Health. Our Center focuses on microvascular responses to the stress of pregnancy and placenta-related pregnancy disorders, which inform later life cardiovascular disease (CVD). We have developed three synergistic research projects under our collective heading, **Women’s Cardiovascular Health and Microvascular Mechanisms: Novel Insights from Pregnancy**. Visit our website [http://go-red-research.com](http://go-red-research.com) for more information.

Our Fellowship Training Program examines the impact of pregnancy and pregnancy outcomes on women’s subsequent risk and responsible mechanisms for hypertension, cardiometabolic disorders and heart disease with clinical, basic and population strategies. The training duration is two years, with training opportunities for MDs, and PhD trained basic scientists and epidemiologists. Fellows receive a competitive stipend in a rich educational and training environment, with opportunities to network with four other AHA “Go Red” centers across the country. Candidates must be US citizens, permanent residents or have an appropriate visa. Click [http://go-red-research.com/training-program/fellowship-application/](http://go-red-research.com/training-program/fellowship-application/) for instructions and to download the application.

For more information about our training program, please contact fellowship coordinator, Ms. Lee Rager, at srager@mwri.magee.edu or Training Center Director, Dr. James Roberts, at jroberts@mwri.magee.edu.
